Version – 3.1

Server Requirements

Script: Airfinch 3.1

AIRFINCH SERVER REQUIREMENTS

INDEX

1. Server Requirements and hosting suggestions

- 1.1 Server requirements
- 1.2 Server hosting suggestions
- 1.3 Terms and conditions on other hostings

1.1 Server requirement for Howzu

Language / Development	Tool Names
Operating System	Ubuntu or Any Linux Distribution Windows
Applications	Apache, NodeJS
Database	MySQL
Libraries	mod_rewrite(rewrite should be enabled), CURL
Minimum RAM Space	3 GB
Packages	PHPMysqladmin, PHP 5.6 to 7.1 with ionCube PHP extension.

1.2 Server Hosting Suggestions

Our demo servers are running on DigitalOcean Droplets with Ubuntu OS, with 1GB RAM, with One CORE processor. It supports around 800 concurrent visits. Our development team recommend the following two hostings or any cloud server with SSD hard disk for a good performance.

Airfinch – Vacation Rental Script & Apps.

Version – 3.1

- DigitalOcean (Signup link: <https://m.do.co/c/2e0c2f84d5dc>)
- Amazon AWS (Signup link: <https://goo.gl/2vceXS>)

Both servers are expandable on run time.

1.3 Terms and conditions on other hostings

Technical support team needs the following details with all the application and softwares installed already on the server.

1) If you use the server Digital Ocean or AWS, We need the following details.
